

ABOUT ME

I'm a Creative Digital Designer and Junior Developer who loves blending visual creativity with technical problem-solving. I graduated with a BSc (Hons) in Computer Science and I'm continuing to grow through personal projects like web development, branding, digital art, and building a Discord bot from scratch.

I'm autistic, which means I process information differently, I focus deeply, spot details others miss, and I'm driven to make work the best it can be. I'm passionate about learning, experimenting with code, and improving through real projects. I'm looking for a supportive team where I can contribute, develop my skills, and bring both my creative and technical strengths.
